Semantics: Primes and Universals (St. in Classification Data Analysis)

Anna Wierzbicka

Semantics: Primes and Universals (St. in Classification Data Analysis) Anna Wierzbicka
Conceptual primitives and semantic universals are the cornerstones of a semantic theory which Anna Wierzbicka has been developing for many years. *Semantics: Primes and Universals* is a major synthesis of her work, presenting a full and systematic exposition of that theory in a non-technical and readable way. It delineates a full set of universal concepts, as they have emerged from large-scale investigations across a wide range of languages undertaken by the author and her colleagues. On the basis of empirical cross-linguistic studies it vindicates the old notion of the "psychic unity of mankind", while at the same time offering a framework for the rigorous description of different languages and cultures.

From reader reviews:

Margaret Stanley:

Information is provisions for people to get better life, information today can get by anyone from everywhere. The information can be a understanding or any news even an issue. What people must be consider while those information which is inside former life are challenging be find than now's taking seriously which one would work to believe or which one the particular resource are convinced. If you obtain the unstable resource then you get it as your main information we will see huge disadvantage for you. All of those possibilities will not happen with you if you take Semantics: Primes and Universals (St. in Classification Data Analysis) as the daily resource information.

Jess Bolan:
