Properties and Processes of Crustal Fault Zones: Volume II (Pageoph Topical Volumes)

Properties and Processes of Crustal Fault Zones: Volume II (Pageoph Topical Volumes)
Recent theoretical developments, acquisitions of large seismic and other data sets, detailed geological studies and novel laboratory experiments offer new opportunities for advancing the understanding of fault zone and earthquake processes. The present and a previous volume provide broad state-of-the-art perspectives on earthquakes and crustal fault zones. Subjects discussed in this volume include imaging of fault zones and the crust, microstructural analyses of fault zone rocks, long paleoseismic record, inferences on stress, stress drops and fault geometries, properties of dynamic ruptures, generation and healing of rock damage, temporal changes of attenuation, postseismic deformation and scaling of earthquake source properties. The volume will be useful to students and professional researchers from Earth Sciences, Material Sciences, Physics and other disciplines, who are interested in properties and processes of earthquakes and faults.
