Bioinorganic Chemistry

Dieter Rehder

Bioinorganic Chemistry Dieter Rehder
Bioinorganic chemistry lies at the interface of inorganic chemistry and biochemistry, and explores the function of inorganic species in living systems - from the iron that helps our red blood cells transport oxygen to our tissues, to the calcium that forms an integral part of our bones.

In their book, Rehder and Nordlander provide a broad overview of this dynamic field, reviewing the key chemical elements that have important biological function, and exploring how the chemistry of these elements is central to the function of biological systems.

With sidebars that both review underlying principles of importance to the subject - including the concepts of magnetism and chirality - and discuss some of the analytical approaches that have enabled us to elucidate the biological role of the chemical elements, *Bioinorganic Chemistry* is the ideal resource for those discovering the field for the first team, and who need a clear, balanced account of the subject.

Online Resource Centre
The Online Resource Centre to accompany *Bioinorganic Chemistry* features figures from the book in electronic format, for use in lecture slides and other teaching materials.
