Start Young! Early Childhood Science Activities Shannan Mcnair
You asked for it---now you've got it! In a focus group at a recent NSTA convention, teachers of prekindergarten through second grade clamored for help. They do want easy-to-do science activities they can use for everyday teaching. But they don't want to be forced to adapt material meant for older children. So here's the solution. Start Young! offers a wealth of simple educational activities designed to use right away with even the littlest scientists. The book includes a chapter of helpful background on the latest thinking about effective ways to introduce science in early childhood. But the bulk of the book is two dozen articles compiled from Science & Children, NSTA's award-winning journal for elementary school teachers. Among the topics:

• Playful science activities for young children
• The science and mathematics of building structures
• Planning a Rock Day
• What makes miniature sleds go, go, go
• Figuring out how big is big and how big is small
• Learning about birds, flight, ponds, and the environment.
• Creating science centers for all students

Everyone who works with young children knows how eager they are to see, smell, hear, and touch the world around them. Encourage that natural curiosity while laying a foundation for a lifetime of learning about science. Start Young! is the age-appropriate resource to help you start them off right.
