Remote Sensing in Hydrology and Water Management

Remote Sensing in Hydrology and Water Management
The book provides comprehensive information on possible applications of remote sensing data for hydrological monitoring and modelling as well as for water management decisions. Mathematical theory is provided only as far as it is necessary for understanding the underlying principles.
The book is especially timely because of new programs and sensors that are or will be realised. ESA, NASA, NASDA as well as the Indian and the Brazilian Space Agency have recently launched satellites or developed plans for new sensor systems that will be especially pertinent to hydrology and water management.
New techniques are presented whose structure differ from conventional hydrological models due to the nature of remotely sensed data.
